Hampton Roads Innovation Collaborative Teams with Booz Allen and Old Dominion University to Host BREACHED!

Cyber Security is one of the larger challenges in today's communications environment with attacks coming from all around the world, and domestically, on a continuing daily basis.

These security breaches can cost billions of dollars of damage, in the financial and personal identity areas, let alone national security.

For these reasons, there is no doubt that Cyber Security is a top concern and focus for some many from personal, to business, to federal and state governments.

Working together on these challenges, Old Dominion University, Booz Allen, and the Hampton Roads Innovation Collaborative are bringing BREACHED! A War Gaming Event and Cyber Symposium to our region.

Breached will be held on April 7th, 2016 and is an invitation only event for CEOs, COOs, CIOs and Cyber leaders in businesses throughout our region.

The event will be held from 11a – 4:30p at ODU's Ted Constant Center with a networking session following the War Gaming exercise.

Dan Bell, President of HRIC stated: "BREACHED is an outstanding approach to enhancing our Cyber protection efforts. We have the traditional approach of sharing information from industry experts, but additionally, we have the excitement of a Cyber War Game Simulation which is a hands-on, practical knowledge approach. The combination is very powerful and informative."

The event is invitation only, but if you believe your company should be represented, contact Dan Bell at the information below.
