Cloud Based Drone Management Software Announced by HAZON Solutions

HAZON Solutions (“HAZON”), the national leader in drone inspection services, announced today the launch of the HAZON Drone Management System (HAZON DMS). HAZON DMS is a secure, web-based management tool providing every drone operator, whether a hobbyist with a single drone or a large corporation with hundreds of drones, a way to safely and efficiently track and manage their drone fleet, pilots and workflow.

“HAZON DMS is the first software designed by professional drone pilots, for professional drone pilots” says HAZON Director of Drone Capability Development,

Ed Hine. “We designed it to be a robust, yet simple to use management tool that can handle all of our safety, maintenance, operational and pilot management requirements with one efficient application.”

Some of the HAZON DMS features include remote pilot (RP) logbooks, RP qualifications tracking, asset tracking, client management, proactive safety and maintenance tracking and reporting, and workflow management. HAZON DMS is offered as software as a service through the freemium model for individual users.

“At HAZON we believe it is important to actively promote the safe and responsible use of drone throughout the entire drone industry, so we offer a free subscription to everyone,” said HAZON COO and Co-Founder, Sean Cushing. “Startup drone businesses now have the ability to utilize this very powerful tool early in their life cycle. This will allow them to focus on operating drones safely and with professional processes in place from day one.”
