

Why Join Foundation for Innovation?

Technology Community of Hampton Roads;

We hope that you've had the time to review our other Foundation for Innovation background material at:
<http://technologyhamptonroads.com/category/business-ecosystem/>

In summary, we are trying to better organize and advance the creation of technology products to export to the world from Hampton Roads.

Foundation for Innovation is a no-cost effort as assembling the assets and ensuring that the “Technology Community” is aware of opportunities and assets to assist in development efforts. From design and engineering, to prototyping, production and logistics. Even legal, patents and funding are all part of the ecosystem.

Our “Ask” is simple. We would like you to join the mailing list without any cost of obligation. Simply go to: www.hrinnovationcollaborative.com and click “Join Our Mailing List” on that main page.

Once on the list, you'll be made aware of everything that we know of in terms of activities and opportunities.

We will proactively inform you of everything we know of so that you can determine if you want to engage in the activity going on.

Reactively, we'll respond to your requests if you have an idea or product that might make sense. First and foremost, your idea will be legally protected to ensure if it takes off, it's YOUR intellectual property for your use, benefit and gain.

Our region has had a great deal of worthy efforts in building a technology design sector and economic pillar. However, we re still challenged to advance in that area. We have lots of stand-alone activity like band musicians practicing before a song. Alone they sound like separate instruments, together a masterpiece.

Please join Foundation for Innovation and help us create tech exports from Hampton Roads. We will have greater strength with you on board and you will benefit from understanding what your assets are and how to help create YOUR technology and innovation masterpiece.

Sincerely,

Dan G. Bell

President, Hampton Roads Innovation Collaborative
